

MCR Cloud Connectivity Overview

Megaport Cloud Router (MCR) provides virtual routing capabilities for on-demand private connectivity at Layer 3.

MCR is preconfigured in data centers in key routing zones around the world, enabling data transfer between:

- Multi-cloud and hybrid cloud environments
- Network service providers
- Cloud service providers

Without physical infrastructure, you can leverage cloud-to-cloud networking, private peering between leading public cloud, IaaS and SaaS providers, and direct connectivity to any provider on the Megaport Software Defined Network. There is no need to own and maintain equipment and no IP address or autonomous system numbers to procure.

Click a Cloud Service Provider link in the site navigation to get started.

For more details on MCR, see [MCR Overview](#).
